FOREWORD

Background of Preparation

To deeply implement CCCC Group's "Internationalization Deepening Reform Plan", solidly advance the Group's overall deployment of constructing a "One Country, One Policy" QHSE management system, and fully promote the Group's overseas QHSE management effectiveness towards leading international standards, the Group's Safety Supervision Department, in 2023, initiated the "Overseas QHSE System Pilot Construction" work. The revision, issuance, and trial implementation of the "Safety and Health Management System" for the CCCC Group Tanzania Country Organization marks a milestone in the Group's "One Country, One Policy" QHSE management system construction.

The compilation of the "Safety and Health Management System" for the Tanzania Country Organization is based on documents such as the "CCCC Group and China Communications Construction Company Safety Production Management System Compilation", combined with the "China Communications Construction Company Limited Tanzania Occupational Health and Safety Management System Benchmarking Analysis Report" to determine the compilation direction, and was commissioned to a third-party consulting agency for its preparation. It aims to integrate the complete and advanced ISO 45001 management requirements and measures into the management system currently operating in Tanzania, ultimately forming a complete set of system documents that can effectively guide all CCCC Group projects in Tanzania in safety and health management.

Success Factors

The purpose of an Occupational Health and Safety Management System (hereinafter referred to as OHSMS) is to provide a framework for managing OH&S risks and opportunities. The aim and intended outcomes are to prevent work-related injury and ill health to workers, provide safe and healthy workplaces, improve OH&S performance, and meet legal requirements and other requirements. However, to ensure the effectiveness of the OHSMS and its ability to achieve its intended outcomes, the implementation of the following factors is critical:

- a. Top management leadership, commitment, responsibilities and accountability of the Country Organization;
- b. The Country Organization's top management developing, leading and promoting a culture in the organization that supports the intended outcomes of the OH&S management system;
- c. Effective internal and external communication;
- d. Consultation and participation of workers, and, where they exist, workers' representatives;
- e. Allocation of the necessary resources to maintain the OHSMS;
- f. OH&S policies and objectives that are compatible with the strategic objectives and direction of the organization;
- g. Effective process(es) for identifying hazards, controlling OH&S risks and taking advantage of OH&S opportunities;
- h. Continual performance evaluation and monitoring of the OH&S management system to improve OH&S performance;
- i. Integration of the OH&S management system into the Country

Organization's daily business processes;

- j. Compliance with its legal requirements and other requirements.

Revision History

The holder of this manual is responsible for ensuring that their copy of the Occupational Health and Safety Manual is kept up-to-date by including all revisions.

1. Introduction

1.1 Purpose

To establish an Occupational Health and Safety Management System (OHSMS) to effectively manage occupational health and safety in its business activities. By implementing this OHSMS, the aim is to eliminate or minimize OHS risks associated with the company's business activities and to comply with legal and other relevant requirements.

This OHS Manual shall:

- a. Define the OHS policy;
- b. Describe the core elements of the OHS management system;
- c. Specify the supporting procedures;
- d. Ensure continual improvement of OHS performance.

1.2 Scope

This manual, including all related operational procedures and supporting documents, is applicable to the health and safety management activities of all member units of the CCCC Group Tanzania Country Organization.

This manual, including all related operational procedures and supporting documents, is applicable to the occupational health and safety management activities of all projects of the CCCC Group Tanzania Country Organization. Its business activities cover: civil engineering; marine engineering; building and foundation; urban integrated development; pipeline engineering; green power; maintenance engineering; design and operation, and other types of construction projects.

This manual, including all related operational procedures and supporting

documents, is applicable to all contractors of the CCCC Group Tanzania Country Organization's projects.

1.3 Establishment, Modification, and Abolition

The Occupational Health and Safety Management System's "Occupational Health and Safety Management Manual (OHSMM)" is prepared by the Tanzania Country Organization and takes effect after approval by the Country Top Management.

The "Occupational Health and Safety Management Manual (OHSMM)" is divided into "Controlled" and "Uncontrolled" copies. Its issuance, modification, and abolition shall be approved by the Country Organization's Top Management, and implemented in accordance with OHSPS-PA-012 "Document and Record Management Procedure".

1.4 Normative References

The preparation of this manual references:

- (1) ISO 45001:2018 Occupational health and safety management systems — Requirements with guidance for use
- (2) ISO 19011:2018 Guidelines for auditing management systems
- (3) CCCC Group and China Communications Construction Company Safety Production Management System Compilation 2025
- (4) Tanzania local laws and regulations

1.5 Terms and Definitions

This manual quotes the relevant terms and definitions from ISO 45001:2018 "Occupational health and safety management systems — Requirements with guidance for use". The main core terms and definitions are

as follows:

1.5.1 Industry Terms (Applicable for use within CCCC Group and between countries)

- **Company:** China Communications Construction Company Limited
- **Country:** Refers to the general term for a state widely recognized internationally as having independent sovereignty
- **Country Organization:** China Communications Construction Company Limited Tanzania Country Organization is a flexible organization led by China Harbour as the country-leading unit and co-constructed by main country-level business participating units. It is a small platform for overall country-level management, undertaking functions such as country market coordination, business synergy, resource sharing, compliance supervision, and work coordination.
- **Project Department:** Refers to the resident institutions and affiliated projects established in Tanzania by units belonging to China Communications Construction Company Limited.
- **Top Management:** The first person in charge of the project appointed by China Communications Construction Company Limited or the highest person in charge of each member unit of the Country Organization.

1.5.2 Standard Terms (ISO 45001 Professional Terms)

- **OH&S:** Occupational Health and Safety
- **OHSMS:** Occupational Health and Safety Management System
- **For other terms, see Appendix 3: Terms**

1.6 OHS Management System Approach

The OH&S management system approach applied in this manual is founded on the concept of Plan-Do-Check-Act (PDCA). The PDCA concept is an iterative process used by organizations to achieve continual improvement. It can be applied to a management system and to each of its individual elements, as follows:

- **Plan (P):** determine and assess OH&S risks, OH&S opportunities and other risks and other opportunities, establish OH&S objectives and processes necessary to deliver results in accordance with the organization's OH&S policy.
- **Do (D):** implement the processes as planned.
- **Check (C):** monitor and measure activities and processes with regard to the OH&S policy and OH&S objectives, and report the results.
- **Act (A):** take actions to continually improve the OH&S performance to achieve the intended outcomes.

ISO 45001 incorporates the PDCA concept into a new framework, as shown in Figure 1.

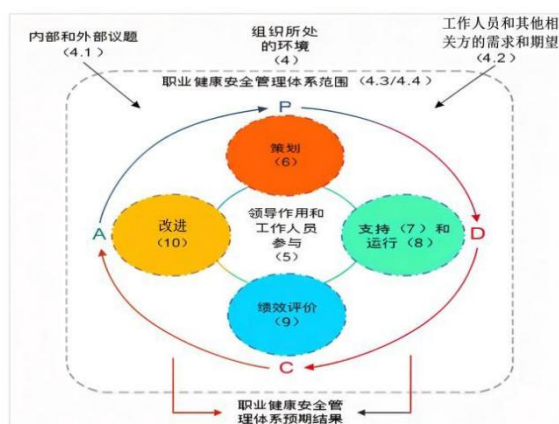

Figure 1: Relationship between PDCA and the ISO 45001 standard model

- *Internal and external issues (4.1)*
 - *Needs and expectations of workers and other interested parties*
- (4.2)*

 - *C Performance evaluation (9)*
 - *Leadership and worker participation (5)*
 - *Intended outcomes of the OH&S management system*

2. Occupational Health and Safety Policy Statement

The Top Management of China Communications Construction Company Limited Tanzania Country Organization establishes, implements, and maintains this policy statement, which declares the commitment to ensure all activities and operations are conducted safely, causing minimal harm to workers, the environment, and the public.

To achieve this goal, the Country Organization has established an Occupational Health and Safety Management System in accordance with the ISO 45001:2018 standard, documented in detail in the "Occupational Health and Safety Management Manual (OHSMM)" to provide guidance for employees.

The objectives of these procedures are to:

1. Prevent accidents;
2. Provide safe and healthy working conditions for the prevention of work-related injury and ill health;
3. Eliminate hazards and reduce OH&S risks;
4. Comply with country-specific local regulations and other relevant requirements;
5. Maintain a high standard of safety at the company's sites;
6. Provide training to employees to enable them to achieve the company's health and safety objectives;
7. Set objectives for achievement and improvement;
8. Monitor and measure the effectiveness of the OHS management system;
9. Commit to consultation and participation of workers;

10. Provide sufficient resources and priority for the implementation of this policy;

11. Occupational health and safety is the primary responsibility of every employee;

12. All employees shall ensure this policy is understood, implemented, and maintained.

As an integral part of the company's continual improvement objectives, this policy will be reviewed annually and updated as necessary.

Occupational health and safety is the first priority of every employee. All personnel shall ensure this policy is understood, implemented, and maintained. As an inseparable part of the company's objectives, it shall be continually improved, reviewed, and updated.

3. Occupational Health and Safety Policy

3.1 OHS Policy

**People-oriented, Life First, Creating a Safe and Green
Work Environment**

**Integrated Prevention, Full Participation, Continually
Reducing and Eliminating Safety Risks**

Top Management:

December 25, 2025

3.2 Understanding the OHS Policy

This policy is an extension based on the OHS policy of CCCC Group. "People-oriented, Life First, Creating a Safe and Green Work Environment" clarifies the core OHS values and vision of the Tanzania Country. "Integrated Prevention, Full Participation, Continually Reducing and Eliminating Safety Risks" is the methodology, answering "how to do it" and "how to achieve" the above goals, emphasizing dynamic management and continual improvement. It reflects the core concepts and implementation paths of the Tanzania Country in OHS, forming a complete ideological system:

- **Values:** Human life and safety are paramount.
- **Vision:** To create a workplace that is both safe and environmentally friendly.
- **Method:** Adopt systematic and comprehensive prevention strategies, relying on the joint efforts of all employees.
- **Commitment:** Never be satisfied with the status quo, committed to continual improvement, and pursuing excellent safety performance.

3.2.1 "People-oriented, Life First"

Clarifies the core OHS value and ultimate goal of the Tanzania Country, and the "highest principle" of safety management. In all production and operation activities, human life, health, and well-being are the highest values, an insurmountable red line.

3.2.2 "Creating a Safe and Green Work Environment"

This is the concrete materialization of the "Life First" concept. "Safe" refers to eliminating or controlling risks in the workplace that could cause

injury or illness, ensuring the physical and mental health of employees. "Green" emphasizes environmentally friendly sustainable development, minimizing the negative impact of production and operation activities on the environment, and creating a healthy, clean, and sustainable work and living environment for employees and society. It reflects the social responsibility of the Tanzania Country Organization.

3.2.3"Integrated Prevention"

Refers to adopting multi-level, multi-dimensional comprehensive prevention measures, reflecting the core idea of modern safety management. "Integrated Prevention" means the combination of human, technical, and managerial prevention measures to build a tight safety net. Specifically reflected in:

(1) Engineering and Technical Measures: Controlling risks at the source through inherently safe design of equipment, technical transformation, isolation, alarm devices, and other hardware.

(2) Management and Process Measures: Establishing sound safety management systems, operating procedures, emergency plans, training systems, etc.

(3) Behavioral and Cultural Measures: Guiding employees to form safe work habits through education, supervision, and incentives.

3.2.4"Full Participation"

Clarifies that safety is not just the responsibility of the safety management department, but the shared responsibility of everyone from top management to every front-line employee. Specifically reflected in:

- **Leadership Commitment:** Management must provide resources,

lead by example, and demonstrate a firm commitment to safety.

- **Employee Empowerment:** Every employee has the right to refuse unsafe work, the obligation to participate in risk identification, and the responsibility to propose safety improvements. It requires establishing open communication channels and encouraging employees to report hazards and unsafe conditions.

3.2.5"Continually Reducing and Eliminating Safety Risks"

Reflects the endless, continual improvement and dynamic process and commitment of OHS. It promises to continuously identify, assess, and control risks through systematic efforts, pursuing the excellent goal of "zero accidents, zero injuries, zero pollution". It is reflected in activities such as regular risk assessments, safety inspections, incident investigations, and management reviews to continuously identify weaknesses in management and take corrective and preventive actions to achieve a spiral-up of safety performance.

4. Context of the Organization

4.1 Understanding the organization and its context

The Country Organization shall determine external and internal issues that are relevant to its purpose and that affect its ability to achieve the intended outcome(s) of its OH&S management system. The Country Organization shall periodically monitor and review these internal and external environmental factors, which may affect the ability of the Country's projects to achieve the intended OHS outcomes.

An understanding of the context of the Country Organization is used to establish, implement, maintain and continually improve its OH&S management system. Internal and external issues can be positive or negative and include conditions, characteristics or changing circumstances that can affect the OH&S management system, for example:

a) external issues, such as:

1. the cultural, social, political, legal, financial, technological, economic and natural surroundings and market competition, whether international, national, regional or local;
2. introduction of new competitors, contractors, subcontractors, suppliers, partners and providers, new technologies, new laws and the emergence of new occupations;
3. new knowledge on products and their effect on health and safety;
4. key drivers and trends relevant to the industry or sector having impact on the organization;
5. relationships with, as well as perceptions and values of, its

external interested parties;

6. changes in relation to any of the above;

b) internal issues, such as:

1. governance, organizational structure, roles and accountabilities;
2. policies, objectives and the strategies that are in place to achieve them;
3. the capabilities, understood in terms of resources, knowledge and competence (e.g. capital, time, human resources, processes, systems and technologies);
4. information systems, information flows and decision-making processes (both formal and informal);
5. introduction of new products, materials, services, tools, software, premises and equipment;
6. relationships with, as well as perceptions and values of, workers;
7. the culture in the organization;
8. standards, guidelines and models adopted by the organization;
9. the form and extent of contractual relationships, including, for example, outsourced activities;
10. working time arrangements;
11. working conditions;
12. changes in relation to any of the above.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-001	Procedure for Management of Organizational Context

4.2 Understanding the needs and expectations of workers and other interested parties

The Country Organization shall determine:

- a) the other interested parties, in addition to workers, that are relevant to the OH&S management system;
- b) the relevant needs and expectations (i.e. requirements) of workers and other interested parties;
- c) which of these needs and expectations are, or could become, legal requirements and other requirements.
- d) Interested parties may have requirements related to climate change.

Interested parties, in addition to workers, can include:

- a) legal and regulatory authorities (local, regional, state/provincial, national or international);
- b) parent organizations;
- c) suppliers, contractors and subcontractors;
- d) workers' representatives;
- e) workers' organizations (trade unions) and employers' organizations;

f) owners, shareholders, clients, visitors, local community and neighbours of the organization and the general public;

g) medical and other community services, media, academia, business associations and non-governmental organizations (NGOs);

h) occupational health and safety organizations, occupational safety and health-care professionals.

Some needs and expectations are mandatory; for example, because they have been incorporated into laws and regulations. The Country Organization may also decide to voluntarily agree to, or adopt, other needs and expectations (e.g. subscribing to a voluntary initiative).

Once the Country Organization adopts them, they are addressed when planning and establishing the OH&S management system.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-002	Procedure for Management of Interested Parties' Needs and Expectations

4.3 Determining the scope of the OH&S management system

The Country Organization has determined the boundaries and applicability of the OH&S management system to establish its scope.

When determining this scope, the organization shall:

- a) consider the external and internal issues referred to in 4.1;
- b) take into account the requirements referred to in 4.2;
- c) take into account the planned or performed work-related activities.

The OH&S management system shall include the activities, products and services within the Country Organization's control or influence that can impact the Country Organization's OH&S performance.

The scope is described in Section 1.2 of this manual.

4.4 OHS management system

The Country Organization has established, implemented, maintained and continually improved an OHSMS, including the processes needed and their interactions, in accordance with the requirements of ISO 45001:2018. This is outlined in this manual (see Figure 1 - Relationship between PDCA and the 45001 standard model in Section 1.6). The Country Organization has established OHS system documents in accordance with the requirements of ISO 45001:2018 (see "Appendix 2: OHS Management System Elements and Supporting Documents Matrix").

5. Leadership and Worker Participation

5.1 Leadership and commitment

5.1.1 The Country Organization's Top Management shall demonstrate leadership and commitment with respect to the OH&S management system by:

- a) taking overall responsibility and accountability for the prevention of work-related injury and ill health, as well as the provision of safe and healthy workplaces and activities;
- b) ensuring that the OH&S policy and related OH&S objectives are established and are compatible with the strategic direction of the Group;
- c) ensuring the integration of the OH&S management system requirements into the Country Organization's business processes;
- d) ensuring that the resources needed to establish, implement, maintain and improve the OH&S management system are available;
- e) communicating the importance of effective OH&S management and of conforming to the OH&S management system requirements;
- f) ensuring that the OH&S management system achieves its intended outcome(s);
- g) directing and supporting persons to contribute to the effectiveness of the OH&S management system;
- h) ensuring and promoting continual improvement;
- i) supporting other relevant management roles to demonstrate their

leadership as it applies to their areas of responsibility;

j) developing, leading and promoting a culture in the organization that supports the intended outcomes of the OH&S management system;

k) protecting workers from reprisals when reporting incidents, hazards, risks and opportunities;

l) ensuring the organization establishes and implements a process(es) for consultation and participation of workers (see 5.4);

m) supporting the establishment and functioning of health and safety committees.

5.1.2 Safety Culture Development

a. The Country Organization's Top Management shall implement the "people-oriented, life first" safety concept, ensure the health and safety of employees, and establish core safety production values centered on respecting life, safety first, continual improvement, and pursuing excellence.

b. The Country Organization's Top Management shall fully consider internal and external cultural characteristics, plan and establish safety culture concepts recognized by all staff, organize and implement safety culture development, cultivate good safety behaviors, and create an excellent safety culture atmosphere.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-024	Procedure for Safety Culture Development Management

5.2 OHS policy

The Country Organization's Top Management shall establish, implement and maintain an OH&S policy that:

a) includes a commitment to provide safe and healthy working conditions for the prevention of work-related injury and ill health and is appropriate to the purpose, size and context of the organization and to the specific nature of its OH&S risks and OH&S opportunities;

b) provides a framework for setting the OH&S objectives;

c) includes a commitment to fulfil legal requirements and other requirements;

d) includes a commitment to eliminate hazards and reduce OH&S risks (see 8.1.2);

e) includes a commitment to continual improvement of the OH&S management system;

f) includes a commitment to consultation and participation of workers, and, where they exist, workers' representatives.

The OH&S policy shall:

- be available as documented information;
- be communicated within the organization;
- be available to interested parties, as appropriate;
- be relevant and appropriate.

The Country Organization's OHS policy is detailed in Section 3.0 "Occupational Health and Safety Policy" of this manual. The OHS policy is

signed by the Country Organization's Top Management, clarifying the overall OHS policy statement and safety policy. All employees shall ensure it is understood, implemented, and maintained. All project departments of the Country Organization shall communicate it to all employees through training, the company intranet, and project notice boards. This policy and statement are available to interested parties upon request.

The policy shall be reviewed periodically by the Country Organization's Top Management. Additionally, a comprehensive review shall be conducted annually, and reviews shall be conducted at any time when applicable regulations or interested parties' needs and expectations change, or when the nature of the Country Organization's business or main OHS risks change.

Worker participation shall be included in the review of the OHS policy.

5.3 Organizational roles, responsibilities and authorities

The Country Organization's Top Management shall ensure that the responsibilities and authorities for relevant roles within the OH&S management system are assigned and communicated at all levels within the Country Organization and maintained as documented information. Workers at each level of the Country Organization shall assume responsibility for those aspects of the OH&S management system over which they have control.

The Country Organization shall assign the responsibility and authority for:

- a) ensuring that the OH&S management system conforms to the requirements of the ISO 45001:2018 standard;
- b) reporting on the performance of the OH&S management system to top management.

5.3.1 The Country Organization's Top Management shall determine and assign safety roles, responsibilities, and authorities for workers. The Country Organization's Top Management shall organize the establishment of bodies such as the Project Safety and Health Committee. Worker roles, responsibilities, and authorities are defined in OHSPS-PA-003 'Job Responsibilities and Authorities' and related procedural documents.

5.3.2 The person in charge of each project department shall ensure that their project's OHS management system conforms to the requirements of the ISO 45001:2018 standard and shall report on the performance of the OHS management system to the Country Organization's Top Management periodically.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-003	Job Responsibilities and Authorities

5.4 Consultation and participation

The Country Organization shall establish, implement and maintain OHSPS-PA-004 'Worker Consultation and Participation Procedure' for the consultation and participation of workers at all applicable levels and functions, and, where they exist, workers' representatives, in the development, planning, implementation, performance evaluation and actions for improvement of the OH&S management system.

The Country Organization shall:

- a) provide mechanisms, time, training and resources necessary for consultation and participation;
- b) provide timely access to clear, understandable and relevant information about the OH&S management system;
- c) determine and remove obstacles or barriers to participation and minimize those that cannot be removed.
- d) emphasize the consultation of non-managerial workers on the following:
 - 1. determining the needs and expectations of interested parties (see 4.2);
 - 2. establishing the OH&S policy (see 5.2);

3. assigning organizational roles, responsibilities and authorities, as applicable (see 5.3);
 4. determining how to fulfil legal requirements and other requirements (see 6.1.3);
 5. establishing OH&S objectives and planning to achieve them (see 6.2);
 6. determining applicable controls for outsourcing, procurement and contractors (see 8.1.4);
 7. determining what needs to be monitored, measured and evaluated (see 9.1);
 8. planning, establishing, implementing and maintaining an audit programme(s) (see 9.2.2);
 9. ensuring continual improvement (see 10.3);
- e) emphasize the participation of non-managerial workers in the following:
1. determining the mechanisms for their consultation and participation;
 2. identifying hazards and assessing risks and opportunities (see 6.1.1 and 6.1.2);
 3. determining actions to eliminate hazards and reduce OH&S risks (see 6.1.4);
 4. determining competence requirements, training needs, training and evaluating training (see 7.2);
 5. determining what needs to be communicated and how this will be done (see 7.4);

6. determining control measures and their effective implementation and use (see 8.1, 8.1.3 and 8.2);

7. investigating incidents and nonconformities and determining corrective actions (see 10.2).

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-004	Worker Consultation and Participation Procedure

6. Planning

6.1 Actions to address risks and opportunities

6.1.1 General

When planning for the OH&S management system, the Country Organization has considered the issues referred to in 4.1 (context), the requirements referred to in 4.2 (interested parties) and 4.3 (the scope of its OH&S management system) and determined the risks and opportunities that need to be addressed to:

- a) give assurance that the OH&S management system can achieve its intended outcome(s);
- b) prevent, or reduce, undesired effects;
- c) achieve continual improvement.

When determining the risks and opportunities for the OH&S management system and its intended outcomes that need to be addressed, the Country Organization shall take into account:

- hazards (see 6.1.2.1);
- OH&S risks and other risks (see 6.1.2.2);
- OH&S opportunities and other opportunities (see 6.1.2.3);
- legal requirements and other requirements (see 6.1.3).

The Country Organization, in its planning process(es), shall determine and assess the risks and opportunities that are relevant to the intended outcomes of the OH&S management system associated with changes in the organization, its processes or the OH&S management system.

In the case of planned changes, permanent or temporary, this assessment shall be undertaken before the change is implemented (see 8.1.3). The Country Organization has established, maintained, and kept OHSPS-PA-005 "Risk and Opportunity Assessment Procedure" and shall maintain and retain documented information on:

- risks and opportunities;
- the process(es) and actions needed to determine and address its risks and opportunities (see 6.1.2 to 6.1.4) to the extent necessary to have confidence that they are carried out as planned.

6.1.2 Hazard identification and assessment of risks and opportunities

6.1.2.1 Hazard identification

The process of hazard identification, risk assessment, and risk control is crucial for eliminating and reducing OHS risks and must be conducted before work begins. The Country Organization has established OHSPS-PA-006 "Hazard Identification and Risk Assessment Procedure" for the continual identification of hazards, assessment of risks, and implementation of necessary control measures during the construction phase. Competent personnel, such as Safety Directors, engineers, specialized subcontractors, or trained and experienced personnel, are responsible for conducting risk assessments.

The risk assessment methodology is described in OHSPS-PA-006 "Hazard Identification and Risk Assessment Procedure".

OHS risks and identified control measures shall be considered when

establishing, implementing, and maintaining the OHS management system.

Risk assessment documents shall be kept up-to-date.

The Country Organization's hazard identification process(es) shall take into account, but not be limited to:

a) how work is organized, social factors (including workload, work hours, victimization, harassment and bullying), leadership and the culture in the organization;

b) routine and non-routine activities and situations, including hazards arising from:

1. infrastructure, equipment, materials, substances and the physical conditions of the workplace;

2. product and service design, research, development, testing, production, assembly, construction, service delivery, maintenance and disposal;

3. human factors;

4. how the work is performed;

5. past relevant incidents, internal or external to the organization, including emergencies, and their causes;

6. potential emergency situations;

7. people, including consideration of:

- (1) those with access to the workplace and their activities, including workers, contractors, visitors and other persons;

- (2) those in the vicinity of the workplace who can be affected by the activities of the organization;

(3) workers at a location not under the direct control of the organization;

c) other issues, including consideration of:

1. the design of work areas, processes, installations, machinery/equipment, operating procedures and work organization, including their adaptation to the needs and capabilities of the workers involved;

2. situations occurring in the vicinity of the workplace caused by work-related activities under the control of the project;

3. situations not controlled by the project and occurring in the vicinity of the workplace that can cause injury and ill health to persons in the workplace;

4. actual or proposed changes in organization, operations, processes, activities and the OH&S management system (see 8.1.3);

5. changes in knowledge of, and information about, hazards.

6.1.2.2 Assessment of OH&S risks and other risks to the OH&S management system

"Other risks" is an expanded category for the OH&S management system (e.g., legal and compliance risks, operational continuity risks, reputational and stakeholder risks, supply chain and subcontractor risks), emphasizing the potential impact of non-traditional safety risks on the management system's objectives. The company must manage these risks through systematic assessment and dynamic monitoring (e.g., compliance checks, stakeholder feedback).

The Country Organization has established, implemented and maintained

OHSPS-PA-006 "Hazard Identification and Risk Assessment Procedure" to:

a) assess OH&S risks from the identified hazards, while taking into account the effectiveness of existing controls;

b) determine and assess the other risks related to the establishment, implementation, operation and maintenance of the OH&S management system.

The Country Organization's methodology(ies) and criteria for the assessment of OH&S risks shall be defined with respect to their scope, nature and timing to ensure they are proactive rather than reactive and are used in a systematic way.

6.1.2.3 Assessment of OH&S opportunities and other opportunities for the OH&S management system

The Country Organization has established, implemented and maintained a process(es) to assess:

a) OH&S opportunities to enhance OH&S performance, while taking into account planned changes to the organization, its policies, its processes or its activities and:

1. opportunities to adapt work, work organization and work environment to workers;

2. opportunities to eliminate hazards and reduce OH&S risks;

b) other opportunities for improving the OH&S management system.

Supporting procedures:

Procedure No.	Management Procedure
OHSPS-PA-005	Risk and Opportunity

	Assessment Procedure
OHSPS-PA-006	Hazard Identification and Risk Assessment Procedure

6.1.3 Determination of legal requirements and other requirements

The Country Organization shall establish, implement and maintain OHSPS-PA-007 "Compliance Management Procedure" to:

a) determine and have access to up-to-date legal requirements and other requirements that are applicable to its hazards, OH&S risks and OH&S management system;

b) Legal requirements can include:

1. legislation (national, regional or international), including statutes and regulations;
2. decrees and directives;
3. orders issued by regulators;
4. permits, licences or other forms of authorization;
5. judgments of courts or administrative tribunals;
6. treaties, conventions, protocols;
7. collective bargaining agreements.

c) Other requirements can include:

1. the organization's requirements;

2. contractual conditions;
3. employment agreements;
4. agreements with interested parties;
5. agreements with health authorities;
6. non-regulatory standards, consensus standards and guidelines;
7. voluntary principles, codes of practice, technical specifications, charters;
8. public commitments of the organization or its parent organization.

d) The Country Organization shall determine how these legal requirements and other requirements apply to the organization and what needs to be communicated;

e) The Country Organization shall take these legal requirements and other requirements into account when establishing, implementing, maintaining and continually improving its OH&S management system.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-007	Compliance Management Procedure

6.1.4 Planning action

The Country Organization has planned and shall take actions to:

- a) address these risks and opportunities;

- b) address legal requirements and other requirements;
- c) prepare for and respond to emergency situations;

The Country Organization shall integrate and implement these actions into its OH&S management system processes or other business processes, and evaluate the effectiveness of these actions.

When planning to take action, the Country Organization has considered the hierarchy of controls and outputs from the OH&S management system. When planning its actions, it has considered best practices, technological options and financial, operational and business requirements.

6.2 OH&S objectives and planning to achieve them

6.2.1 OH&S objectives

The Country Organization has established and maintains documented OHSPS-PA-008 "Safety Objective Management Procedure" for relevant functions and levels to achieve continual improvement in OHS performance.

The Country Organization shall periodically review the OH&S objectives.

When establishing and reviewing objectives, they shall:

- a) be consistent with the OH&S policy;
- b) be measurable (if practicable) or capable of performance evaluation;
- c) take into account:
 - 1. applicable requirements, such as legal requirements and interested party requirements;
 - 2. the results of the assessment of risks and opportunities;
 - 3. the results of consultation with workers (see 5.4) and, where they exist, workers' representatives;
- d) be monitored;
- e) be communicated;
- f) be updated as appropriate.

6.2.2 Planning to achieve OH&S objectives

When planning how to achieve its OH&S objectives, the Country Organization shall determine:

- a) what will be done;
- b) what resources will be required;
- c) who will be responsible;
- d) when it will be completed;
- e) how the results will be evaluated, including indicators for monitoring;
- f) how the actions to achieve OH&AdditionalS objectives will be integrated into the organization's business processes.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-008	Safety Objective Management Procedure

7. Support

7.1 Resources

The Country Organization shall determine and provide the resources needed for the establishment, implementation, maintenance and continual improvement of the OH&S management system. Resources include human, natural, infrastructure, technology and financial resources.

Infrastructure includes the Country Organization's buildings, plant, equipment, utilities, information technology and communications systems, and emergency containment systems. All project departments of the Country Organization shall ensure the maintenance and management of infrastructure.

The Country Organization has established OHSPS-PA-009 "Procedure for Management of Special Funds for Safety Production" to regulate the management and control of resources and funds necessary for the operation of the OHSMS.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-009	Procedure for Management of Special Funds for Safety Production

7.2 Competence

The Country Organization shall ensure that any person under its control performing tasks that can affect OHS performance is competent on the basis of appropriate education, training or experience, and shall retain associated records.

To this end, the Country Organization shall:

- a) determine the necessary competence of workers that affects or can affect its OH&S performance;
- b) in applicable cases, take actions to acquire and maintain the necessary competence, and evaluate the effectiveness of the actions taken.

The Country Organization has established and maintains OHSPS-PA-010 "Safety Education and Training Management Procedure" to identify the training needs of personnel under its control. When determining the competence for each role, the Country Organization should take into account things such as:

- a) the education, training, qualification and experience necessary to undertake the role and the re-training necessary to maintain competence;
- b) the work environment;
- c) the preventive and control measures resulting from the risk assessment process(es);
- d) the requirements applicable to the OH&S management system;
- e) legal requirements and other requirements;
- f) the OH&S policy;
- g) the potential consequences of compliance and noncompliance,

including the impact on the worker's health and safety;

h) the value of participation of workers in the OH&S management system based on their knowledge and skill;

i) the duties and responsibilities associated with the roles;

j) individual capabilities, including experience, language skills, literacy and diversity;

k) the relevant updating of the competence made necessary by context or work changes.

Workers can assist the organization in determining the competence needed for roles.

Workers should have the necessary competence to remove themselves from situations of imminent and serious danger.

For this purpose, it is important that the Country Organization provides workers with sufficient training on hazards and risks associated with their work.

As appropriate, workers should receive the training required to enable them to carry out their representative functions for occupational health and safety effectively.

The Country Organization shall provide OHS-related training at no cost to workers, and retain records of education, training, and qualifications.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-010	Safety Education and Training Management Procedure

7.3 Awareness

The Country Organization shall ensure all workers under its management are aware of:

- a) the OH&S policy and OH&S objectives;
- b) their contribution to the effectiveness of the OH&S management system, including the benefits of improved OH&S performance;
- c) the implications and potential consequences of not conforming to the OH&S management system requirements;
- d) incidents and the outcomes of investigations that are relevant to them;
- e) hazards, OH&S risks and actions determined that are relevant to them;
- f) the ability to remove themselves from work situations that they consider present an imminent and serious danger to their life or health, as well as the arrangements for protecting them from undue consequences for doing so.

All project departments of the Country Organization shall enhance the safety awareness of all personnel through methods such as education and training, safety promotion, visual management, safety activities, safety culture development, and incentive mechanisms.

7.4 Communication

7.4.1 General

The Country Organization shall establish, implement and maintain OHSPS-PA-011 "Communication Management Procedure" needed for the internal and external communications relevant to the OH&S management system, including determining:

- a) on what it will communicate;
- b) when to communicate;
- c) with whom to communicate:
 - 1. internally among the various levels and functions of the Country Organization;
 - 2. among contractors and visitors to the workplace;
 - 3. among other interested parties;
- d) how to communicate; e.g., communication, memos, emails, formal or informal meetings, training, verbal discussions, safety bulletin circulation, notice board displays, and company intranet are considered effective communication channels.

The Country Organization shall take into account diversity aspects (e.g. gender, language, culture, literacy, disability) when considering its communication needs. The Country Organization shall ensure that the views of external interested parties are considered in establishing its communication process(es).

When establishing its communication process(es), the Country

Organization shall:

- take into account its legal requirements and other requirements;
- ensure that OH&S information to be communicated is consistent with information generated within the OH&S management system, and is reliable.

The Country Organization shall respond to relevant communications on its OH&S management system, and shall retain documented information as evidence of its communications, as appropriate.

7.4.2 Internal communication

The Country Organization shall:

- a) internally communicate information relevant to the OH&S management system among the various levels and functions of the organization, including changes to the OH&S management system, as appropriate;
- b) ensure its communication process(es) enables workers to contribute to continual improvement.

7.4.3 External communication

The Country Organization shall externally communicate information relevant to the OH&S management system, as established by the OHSPS-PA-011 "Communication Management Procedure" and taking into account its legal requirements and other requirements.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-011	Communication Management Procedure

7.5 Documented information

7.5.1 General

The Country Organization's OH&S management system shall include:

- a) documented information required by ISO 45001:2018;
- b) documented information determined by the Country Organization as being necessary for the effectiveness of the OH&S management system.

The Country Organization has established and maintains the "Occupational Health and Safety Management Manual (OHSMM)", which describes the scope and core elements of the OHS management system and their interaction, and provides guidance to related documents.

The Country Organization's OHSMS documentation is specified in OHSPS-PA-012 "Document and Record Management Procedure". The following is the hierarchical structure of OHS documents:

- **Level 1:** Occupational Health and Safety Management Manual (The framework document for the OHSMS)
- **Level 2:** Management Procedures (Used to support the OHSMS, specifying processes for key management activities)
- **Level 3:** Supporting Documents (Specifications, regulations,

guidelines, rules, detailing specific operations/posts, technical standards, management measures, directly guiding grassroots execution)

Project Safety Plan (Project-specific safety management plan)

- **Level 4:** Safety Records (Data, evidence of activities, facilitating traceability and improvement)

7.5.2 Creating and updating

All OHSMS documented information shall be appropriately controlled. The Country Organization has established OHSPS-PA-012 "Document and Record Management Procedure" to ensure appropriate:

- a) identification and description (e.g. a title, date, author or reference number);
- b) format (e.g. language, software version, graphics) and media (e.g. paper, electronic);
- c) review and approval for suitability and adequacy before issue;
- d) documents are reviewed and updated as necessary and re-approved;
- e) ensuring that changes and the current revision status of documents are identified.

7.5.3 Control of documented information

Documented information required by the OH&S management system shall be controlled in accordance with OHSPS-PA-012 "Document and Record Management Procedure" to ensure:

- a) it is available and suitable for use, where and when it is needed;

b) it is adequately protected (e.g. from loss of confidentiality, improper use or loss of integrity).

For the control of documented information, the Country Organization shall address the following activities, as applicable:

- distribution, access, retrieval and use;
 - storage and preservation, including preservation of legibility;
- (Confidential information includes personal and medical information, etc.)
- control of changes (e.g. version control);
 - retention and disposition.

Documented information of external origin determined by the Country Organization to be necessary for the planning and operation of the OH&S management system shall be identified, as appropriate, and controlled by the project departments of the Country Organization.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-012	Document and Record Management Procedure

8. Operation

8.1 Operational planning and control

8.1.1 General

The Country Organization has established and implemented OHSPS-PA-013 "Operational Control Management Procedure" to ensure the management of operational planning and control, by eliminating hazards or, if not practicable, by reducing the OH&S risks to levels as low as reasonably practicable for operational areas and activities, to enhance occupational health and safety.

Examples of operational control of the processes include:

- a) the use of work procedures, operating procedures, work guidelines, permits-to-work, rules and regulations, and systems of work;
- b) ensuring the competence of workers (e.g., through training, education, qualification);
- c) establishing preventive or predictive maintenance and inspection programmes for equipment and facilities;
- d) specifications for the procurement of materials, hazardous chemicals, and outsourced services;
- e) control measures shall consider legal requirements and other requirements, or manufacturers' instructions for equipment;
- f) application of engineering and administrative controls;
- g) adapting work to workers; for example, by:
 - 1. defining, or redefining, how the work is organized (e.g.,

avoiding continuous overtime leading to fatigue);

2. the induction of new workers (e.g., new employees shadow experienced staff before operating high-risk positions independently);

3. defining, or redefining, processes and working environments (e.g., installing ventilation and cooling facilities in high-temperature areas);

4. using ergonomic approaches when designing new, or modifying, workplaces, equipment, etc. (e.g., setting reasonable heights for work platforms to suit personnel operation needs).

The Country Organization shall establish and maintain OHSPS-PA-013 "Operational Control Management Procedure" in accordance with the above operational control contents, and maintain and retain necessary documented information as required by the procedure, to have confidence that the processes have been carried out as planned.

At multi-employer workplaces (e.g., involving general contractors, subcontractors, supervision units, outsourced parties), the Country Organization shall coordinate the relevant parts of the OH&S management system with the other organizations.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-013	Operational Control Management Procedure

8.1.2 Eliminating hazards and reducing OH&S risks

The Country Organization shall use the hierarchy of controls or a combination of controls to eliminate hazards and reduce OH&S risks, reducing OHS risks to a level that is as low as reasonably practicable:

a) Elimination: Planned OHSPS-PA-025 "Inherently Safe Management Procedure", aiming to fundamentally eliminate or control hazards by optimizing design, equipment, facilities, materials, management, and personnel, achieving safety production goals without relying on excessive external protection and management measures, especially by fully identifying and assessing risks during the project planning and design stages to achieve inherent safety.

b) Substitution: substitute with less hazardous processes, operations, materials or equipment; e.g., using robotic arms to replace manual handling of high-risk materials, water-based paints to replace oil-based paints to reduce fire and explosion risks, explosion-proof electrical equipment to replace standard equipment in flammable and explosive environments.

c) Use engineering controls and reorganization of work: isolating people from hazard; implementing collective protective measures (e.g. isolation, machine guarding, ventilation systems, residual-current devices); intelligent equipment (e.g., sensors, electronic fences); reducing noise; protecting against falls from height by using guard rails; reorganizing work to avoid people working alone, unhealthy work hours and workload, or to prevent major injuries.

d) Use administrative controls, including training: pre-shift meetings; safety briefings; permit-to-work; periodic safety inspections and hazard

identification; conducting various safety education and training; ensuring personnel have corresponding qualification certificates (special operations personnel must be certified, key personnel must undergo systematic training and assessment); risk identification and control; developing safe operating procedures; establishing emergency measures; changing work patterns; coordinating subcontractor activities; providing regular health checks for personnel identified with occupational hazards, etc.

e) Use adequate personal protective equipment (PPE): providing adequate PPE, including clothing and instructions for PPE utilization and maintenance (e.g. safety shoes, safety glasses, hearing protection, gloves).

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-025	Inherently Safe Management Procedure

8.1.3 Management of change

The Country Organization has established OHSPS-PA-014 "Management of Change Procedure" for the implementation and control of planned temporary and permanent changes that impact OH&S performance, including:

a) new products, services and processes, or changes to existing products, services and processes, including:

1. workplace locations and surroundings; (e.g., workplace relocation, moving work area from indoor to outdoor)
2. work organization; (e.g., changes in shift patterns, merging of shifts and personnel reorganization)
3. working conditions; (e.g., changes in high/low temperature work, changes from ground level to working at height)
4. equipment; (e.g., introduction of new lifting machinery (new equipment), upgrading old tower cranes (existing equipment change))
5. work force; (e.g., induction of a large number of new employees (new personnel), redeployment of core technical staff (personnel change))

b) changes to legal requirements and other requirements;

c) changes in knowledge or information about hazards and OH&S risks;

d) developments in knowledge and technology.

When the above changes occur, the objective is to enhance occupational health and safety at work, by minimizing the introduction of new hazards and OH&S risks into the work environment. Depending on the nature of an expected change, the Country Organization can use an appropriate methodology(ies) for assessing the OH&S risks and the OH&S opportunities of

the change. The need to manage change can be an outcome of planning.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-014	Management of Change Procedure

8.1.4 Procurement

8.1.4.1 General

The Country Organization has established OHSPS-PA-015 "Procurement Management Procedure", which specifies the procurement process control and requirements for products, hazardous materials or substances, raw materials, equipment, or services. The procurement process(es) shall be used to determine, assess and eliminate hazards, and to reduce OH&S risks associated with them.

The Country Organization shall verify that equipment, installations and materials are safe for use by workers by ensuring:

- a) equipment is delivered according to specification and is tested to ensure it works as intended;
- b) installations are commissioned to ensure they function as designed;
- c) materials are delivered according to their specifications;
- d) any usage requirements, precautions or other protective measures are communicated and made available.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-015	Procurement Management Procedure

8.1.4.2 Contractors

The Country Organization has established OHSPS-PA-016 "Contracting and Subcontracting Management Procedure". Examples of contractor activities and operations include maintenance, construction, operations, security, cleaning and a number of other functions. Contractors can also include consultants or specialists in administrative, accounting and other functions.

Assignment of activities to contractors does not eliminate the Country Organization's responsibility for the occupational health and safety of workers. The Country Organization shall coordinate its procurement process(es) with its contractors, in order to identify hazards and to assess and control the OH&S risks arising from:

- a) the contractors' activities and operations that impact the Country Organization's project;
- b) the organization's activities and operations that impact the contractors' workers;
- c) the contractors' activities and operations that impact other interested parties in the workplace.

The Country Organization shall ensure that the requirements of its OH&S management system are met by contractors and their workers. The Country Organization has established and maintains OHSPS-PA-016 "Contracting and Subcontracting Management Procedure" which defines and applies

occupational health and safety criteria for the selection of contractors.

8.1.4.3 Outsourcing

When outsourcing, the Country Organization needs to have control of the outsourced functions and process(es) to achieve the intended outcome(s) of the OH&S management system.

In the outsourced functions and process(es), the responsibility for conforming to the requirements of the OH&S management system is retained by the Country Organization.

All project departments of the Country Organization shall ensure that its outsourcing arrangements are consistent with local country legal requirements and other requirements. The management of the outsourcing process shall be implemented in accordance with OHSPS-PA-016 "Contracting and Subcontracting Management Procedure".

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-016	Contracting and Subcontracting Management Procedure

8.2 Emergency preparedness and response

In order to prepare for and respond to potential emergency situations identified in the Country Organization's construction projects, the Country Organization shall establish, implement and maintain OHSPS-PA-017 "Emergency Preparedness and Response Management Procedure", including:

- a) establishing a planned response to emergency situations, including the provision of first aid;

- b) providing training for the planned response;

- c) periodically testing and exercising the planned response capability;

- d) evaluating performance and, as necessary, revising the planned response, including after testing and, in particular, after the occurrence of emergency situations;

- e) communicating and providing relevant information to all workers on their duties and responsibilities;

- f) communicating relevant information to contractors, visitors, emergency response services, government authorities and, as appropriate, the local community;

- g) taking into account the needs and capabilities of all relevant interested parties and ensuring their involvement, as appropriate, in the development of the planned response.

The Country Organization shall establish emergency response plans (e.g., emergency plans, first aid procedures) and retain relevant records such as emergency training, drills, revisions to emergency response plans, internal/external communications, and emergency reports.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-017	Emergency Preparedness and Response Management Procedure

9. Performance Evaluation

9.1 Monitoring, measurement, analysis and performance evaluation

9.1.1 General

The Country Organization shall establish, implement and maintain OHSPS-PA-018 "OHS Performance Monitoring and Measurement Management Procedure" for monitoring, measurement, analysis and performance evaluation.

The Country Organization has determined in the procedure:

a) what needs to be monitored and measured, including:

1. occupational health complaints, health of workers (through surveillance) and work environment;
2. work-related incidents, injuries and ill health, and complaints, including trends;
3. the extent to which legal requirements and other requirements are fulfilled;
4. its activities and operations related to identified hazards, risks and opportunities;
5. progress towards achievement of the organization's OH&S objectives;
6. effectiveness of operational and other controls;

b) the methods for monitoring, measurement, analysis and performance evaluation, as applicable, to ensure valid results;

c) the criteria against which the organization will evaluate its OH&S performance;

d) when the monitoring and measuring shall be performed;

e) when the results from monitoring and measurement shall be analysed, evaluated and communicated.

The Country Organization shall evaluate the OH&S performance and determine the effectiveness of the OH&S management system.

The Country Organization shall ensure that monitoring and measuring equipment is calibrated or verified as applicable, and is used and maintained as appropriate. Legal requirements or other requirements (e.g. national or international standards) may concern the calibration or verification of monitoring and measuring equipment.

The Country Organization shall retain appropriate documented information:

— as evidence of the results of monitoring, measurement, analysis and performance evaluation;

— on the maintenance, calibration or verification of measuring equipment.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-018	OHS Performance Monitoring and Measurement Management Procedure

9.1.2 Evaluation of compliance

The Country Organization shall establish, implement and maintain OHSPS-PA-007 "Compliance Management Procedure" for evaluating compliance with applicable legal requirements and other requirements. The Country Organization shall:

- a) determine the frequency and method(s) for the evaluation of compliance in the procedure;
- b) evaluate compliance and take action if needed (see 10.2);
- c) maintain knowledge and understanding of its compliance status with legal requirements and other requirements;
- d) retain documented information of the compliance evaluation result(s).

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-007	Compliance Management Procedure

9.2 Internal audit

9.2.1 General

The Country Organization shall conduct internal audits at planned intervals to provide information on whether the OH&S management system:

a) conforms to:

1. the Country Organization's own requirements for its OH&S management system, including the OH&S policy and OH&S objectives;
2. the requirements of ISO 45001:2018;

b) is effectively implemented and maintained.

9.2.2 Internal audit programme

The Country Organization shall:

- a) plan, establish, implement and maintain an audit programme(s) including the frequency, methods, responsibilities, consultation, planning requirements and reporting, which shall take into consideration the importance of the processes concerned and the results of previous audits;
- b) define the audit criteria and scope for each audit;
- c) select auditors and conduct audits to ensure objectivity and the impartiality of the audit process;
- d) ensure that the results of the audits are reported to relevant managers;
- e) ensure that relevant audit results are reported to workers, and, where

they exist, workers' representatives, and other relevant interested parties;

f) take action to address nonconformities and continually improve its OH&S performance (see Clause 10);

g) retain documented information as evidence of the implementation of the audit programme and the audit results.

The Country Organization has planned, implemented, and maintains OHSPS-PA-019 "Internal Audit Management Procedure" which specifies the process for OHSMS internal audits and the requirements for the internal audit programme.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-019	Internal Audit Management Procedure

9.3 Management review

The Country Organization's Top Management shall review the Country Organization's OH&S management system, at planned intervals, to ensure its continuing suitability, adequacy and effectiveness. The Country Organization has established, implemented, and maintains OHSPS-PA-020 "Management Review Procedure" to control the management review process.

The management review shall include consideration of:

- a) the status of actions from previous management reviews;
- b) changes in external and internal issues that are relevant to the OH&S management system, including:
 - 1. the needs and expectations of interested parties;
 - 2. legal requirements and other requirements;
 - 3. risks and opportunities;
- c) the extent to which the OH&S policy and the OH&S objectives have been met;
- d) information on the OH&S performance, including trends in:
 - 4. incidents, nonconformities, corrective actions and continual improvement;
 - 5. monitoring and measurement results;
 - 6. results of evaluation of compliance with legal requirements and other requirements;
 - 7. audit results;
 - 8. consultation and participation of workers;

9. risks and opportunities;

e) adequacy of resources for maintaining an effective OH&S management system;

f) relevant communication(s) with interested parties;

g) opportunities for continual improvement.

The outputs of the management review shall include decisions related to:

— the continuing suitability, adequacy and effectiveness of the OH&S management system in achieving its intended outcomes;

— continual improvement opportunities;

— any need for changes to the OH&S management system;

— resources needed;

— actions, if needed;

— opportunities to improve integration of the OH&S management system with other business processes;

— any implications for the strategic direction of the organization.

Top management shall communicate the relevant outputs of management reviews to workers, and, where they exist, workers' representatives.

The Country Organization shall retain documented information as evidence of the results of management reviews.

Supporting procedure:

Procedure No.	Management Procedure
OHSPS-PA-020	Management Review Procedure

10. Improvement

10.1 General

The Country Organization shall determine opportunities for improvement (see Clause 9) and implement necessary actions to achieve the intended outcomes of its OH&S management system.

- **Proactive Improvement:** Actions taken based on data trend analysis, hazard identification, risk assessment, internal audits, and management reviews to identify potential hazards and reduce or eliminate the occurrence of incidents before they happen.
- **Reactive Improvement:** Actions taken based on incidents that have already occurred to prevent the recurrence of similar incidents.

10.2 Incident, nonconformity and corrective action

The Country Organization has established, implemented and maintains OHSPS-PA-021 "Incident and Accident Reporting and Investigation Procedure" and OHSPS-PA-022 "Nonconformity and Corrective Action Management Procedure". These procedures include process(es) for reporting, investigating and taking action, to determine and manage incidents and nonconformities.

When an incident or a nonconformity occurs, the Country Organization shall:

- a) react in a timely manner to the incident or nonconformity and, as applicable:

1. take action to control and correct it;
2. deal with the consequences;

b) evaluate, with the participation of workers and the involvement of other relevant interested parties, the need for corrective action to eliminate the root cause(s) of the incident or nonconformity, in order that it does not recur or occur elsewhere, by:

1. investigating the incident or reviewing the nonconformity;
2. determining the cause(s) of the incident or nonconformity (root cause);
3. determining if similar incidents have occurred, if nonconformities exist, or if they could potentially occur;

d) review existing assessments of OH&S risks and other risks, as appropriate (see 6.1);

e) determine and implement any action needed, including corrective action, in accordance with the hierarchy of controls (see 8.1.2) and the management of change (see 8.1.3);

f) assess OH&S risks that relate to new or changed hazards, prior to taking action;

g) review the effectiveness of any action taken, including corrective action;

h) make changes to the OH&S management system, if necessary.

Corrective actions shall be appropriate to the effects or potential effects of the incidents or nonconformities encountered.

The Country Organization shall retain documented information as evidence of:

— the nature of the incidents or nonconformities and any subsequent actions taken;

— the results of any action and corrective action, including their effectiveness.

The Country Organization shall communicate this documented information to relevant workers, and, where they exist, workers' representatives, and other relevant interested parties.

Supporting procedures:

Procedure No.	Management Procedure
OHSPS-PA-021	Incident and Accident Reporting and Investigation Procedure
OHSPS-PA-022	Nonconformity and Corrective Action Management Procedure

10.3 Continual improvement

The Country Organization shall continually improve the suitability, adequacy and effectiveness of the OH&S management system, by:

- a) enhancing OH&S performance;
- b) promoting a culture that supports an OH&S management system;
- c) promoting the participation of workers in implementing actions for the continual improvement of the OH&S management system;

d) communicating the relevant results of continual improvement to workers, and, where they exist, workers' representatives;

e) maintaining and retaining documented information as evidence of continual improvement.

Examples of continual improvement issues include, but are not limited to:

a) new technology;

b) good practices, both internal (e.g., demonstration sites, benchmark teams) and external to the organization;

c) suggestions and recommendations from interested parties;

d) new knowledge and understanding of occupational health and safety-related issues;

e) new or improved materials;

f) changes in worker capabilities or competence;

g) improvement requirements proposed based on incident investigation reports and safety hazard analysis results;

h) achieving improved performance with fewer resources (i.e. simplification, streamlining, etc.).

The Country Organization shall retain evidence of continual improvement in accordance with OHSPS-PA-023 "Continual Improvement Management Procedure", such as: improvement suggestion records, improvement plans, and improvement result acceptance reports. The results of continual improvement shall serve as input for management review.

Appendix 3: Terms

The following terms and definitions apply for the purposes of this document.

3.1

organization

person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its objectives (3.16)

Note 1 to entry: The concept of organization includes, but is not limited to sole-trader, company, corporation, firm, enterprise, authority, partnership, charity or institution, or part or combination thereof, whether incorporated or not, public or private.

Note 2 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.2

interested party (preferred term)

stakeholder (admitted term)

person or organization (3.1) that can affect, be affected by, or perceive itself to be affected by a decision or activity

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.3

worker

person performing work or work-related activities that are under the control of the organization (3.1)

Note 1 to entry: Persons perform work or work-related activities under various arrangements, paid or unpaid, such as regularly or temporarily, intermittently or seasonally, casually or on a part-time basis.

Note 2 to entry: Workers include top management (3.12), managerial and non-managerial persons.

Note 3 to entry: The work or work-related activities performed under the control of the organization may be performed by workers employed by the organization, workers of external providers, contractors, individuals, agency workers, and by other persons to the extent the organization shares control over their work or work-related activities, according to the context of the organization.

3.4

participation

involvement in decision-making

Note 1 to entry: Participation includes engaging health and safety committees and workers' representatives, where they exist.

3.5

consultation

seeking views before making a decision

Note 1 to entry: Consultation includes engaging health and safety committees and workers' representatives, where they exist.

3.6

workplace

place under the control of the organization (3.1) where a person needs to be or to go for work purposes

Note 1 to entry: The organization's responsibilities under the OH&S management system (3.11) for the workplace depend on the degree of control over the workplace.

3.7

contractor

external organization (3.1) providing services to the organization in accordance with agreed specifications, terms and conditions

Note 1 to entry: Services may include construction activities, among others.

3.8

requirement

need or expectation that is stated, generally implied or obligatory

Note 1 to entry: "Generally implied" means that it is custom or common practice for the organization (3.1) and interested parties (3.2) that the need or expectation under consideration is implied.

Note 2 to entry: A specified requirement is one that is stated, for example in documented information (3.24).

Note 3 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.9

legal requirements and other requirements

legal requirements that an organization (3.1) has to comply with and other requirements (3.8) that an organization has to or chooses to comply with

Note 1 to entry: For the purposes of this document, legal requirements and other requirements are those relevant to the OH&S management system (3.11).

Note 2 to entry: "Legal requirements and other requirements" include the provisions in collective agreements.

Note 3 to entry: Legal requirements and other requirements include those that determine the persons who are workers' (3.3) representatives in accordance with laws, regulations, collective agreements and practices.

3.10

management system

set of interrelated or interacting elements of an organization (3.1) to establish policies (3.14) and objectives (3.16) and processes (3.25) to achieve those objectives

Note 1 to entry: A management system can address a single discipline or several disciplines.

Note 2 to entry: The system elements include the organization's structure, roles and responsibilities, planning, operation, performance evaluation and improvement.

Note 3 to entry: The scope of a management system may include the whole of the organization, specific and identified functions of the organization, specific and identified sections of the organization, or one or more functions

across a group of organizations.

Note 4 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 2 to entry has been modified to clarify some of the wider elements of a management system.

3.11

occupational health and safety management system

OH&S management system

management system (3.10) or part of a management system used to achieve the OH&S policy (3.15)

Note 1 to entry: The intended outcomes of the OH&S management system are to prevent injury and ill health (3.18) to workers (3.3) and to provide safe and healthy workplaces (3.6).

Note 2 to entry: The terms “occupational health and safety” (OH&S) and “occupational safety and health” (OSH) have the same meaning.

3.12

top management

person or group of people who directs and controls an organization (3.1) at the highest level

Note 1 to entry: Top management has the power to delegate authority and provide resources within the organization, provided ultimate responsibility for the OH&S management system (3.11) is retained.

Note 2 to entry: If the scope of the management system (3.10) covers only

part of an organization, then top management refers to those who direct and control that part of the organization.

Note 3 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 1 to entry has been modified to clarify the responsibility of top management in relation to an OH&S management system.

3.13

effectiveness

extent to which planned activities are realized and planned results achieved

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.14

policy

intentions and direction of an organization (3.1), as formally expressed by its top management (3.12)

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.15

occupational health and safety policy

OH&S policy

policy (3.14) to prevent work-related injury and ill health (3.18) to workers (3.3) and to provide safe and healthy workplaces (3.6)

3.16

objective

result to be achieved

Note 1 to entry: An objective can be strategic, tactical, or operational.

Note 2 to entry: Objectives can relate to different disciplines (such as financial, health and safety, and environmental goals) and can apply at different levels (such as strategic, organization-wide, project, product and process (3.25)).

Note 3 to entry: An objective can be expressed in other ways, e.g. as an intended outcome, a purpose, an operational criterion, as an OH&S objective (3.17), or by the use of other words with similar meaning (e.g. aim, goal, or target).

Note 4 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. The original Note 4 to entry has been deleted as the term “OH&S objective” has been defined separately in 3.17.

3.17

occupational health and safety objective

OH&S objective

objective (3.16) set by the organization (3.1) to achieve specific results consistent with the OH&S policy (3.15)

3.18

injury and ill health

adverse effect on the physical, mental or cognitive condition of a person

Note 1 to entry: These adverse effects include occupational disease, illness and death.

Note 2 to entry: The term “injury and ill health” implies the presence of injury or ill health, either on their own or in combination.

3.19

hazard

source with a potential to cause injury and ill health (3.18)

Note 1 to entry: Hazards can include sources with the potential to cause harm or hazardous situations, or circumstances with the potential for exposure leading to injury and ill health.

3.20

risk

effect of uncertainty

Note 1 to entry: An effect is a deviation from the expected — positive or negative.

Note 2 to entry: Uncertainty is the state, even partial, of deficiency of information related to, understanding or knowledge of, an event, its consequence, or likelihood.

Note 3 to entry: Risk is often characterized by reference to potential “events” (as defined in ISO Guide 73:2009, 3.5.1.3) and “consequences” (as defined in ISO Guide 73:2009, 3.6.1.3), or a combination of these.

Note 4 to entry: Risk is often expressed in terms of a combination of the consequences of an event (including changes in circumstances) and the associated “likelihood” (as defined in ISO Guide 73:2009, 3.6.1.1) of occurrence.

Note 5 to entry: In this document, where the term “risks and opportunities” is used this means OH&S risks (3.21), OH&S opportunities (3.22) and other risks and other opportunities for the management system.

Note 6 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 5 to entry has been added to clarify the term "risks and opportunities" for its use within this document.

3.21

occupational health and safety risk

OH&S risk

combination of the likelihood of occurrence of a work-related hazardous event(s) or exposure(s) and the severity of injury and ill health (3.18) that can be caused by the event(s) or exposure(s)

3.22

occupational health and safety opportunity

OH&S opportunity

circumstance or set of circumstances that can lead to improvement of OH&S performance (3.28)

3.23

competence

ability to apply knowledge and skills to achieve intended results

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.24

documented information

information required to be controlled and maintained by an organization (3.1) and the medium on which it is contained

Note 1 to entry: Documented information can be in any format and media, and from any source.

Note 2 to entry: Documented information can refer to:

- a) the management system (3.10), including related processes (3.25);
- b) information created in order for the organization to operate (documentation);
- c) evidence of results achieved (records).

Note 3 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.25

process

set of interrelated or interacting activities which transforms inputs into outputs

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the

Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.26

procedure

specified way to carry out an activity or a process (3.25)

Note 1 to entry: Procedures may be documented or not.

[SOURCE: ISO 9000:2015, 3.4.5, modified — Note 1 to entry has been modified.]

3.27

performance

measurable result

Note 1 to entry: Performance can relate either to quantitative or qualitative findings. Results can be determined and evaluated by qualitative or quantitative methods.

Note 2 to entry: Performance can relate to the management of activities, processes (3.25), products (including services), systems or organizations (3.1).

Note 3 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 1 to entry has been modified to clarify the types of methods that may be used for determining and evaluating results.

3.28

occupational health and safety performance

OH&S performance

performance (3.27) related to the effectiveness (3.13) of the prevention of

injury and ill health (3.18) to workers (3.3) and the provision of safe and healthy workplaces (3.6)

3.29

outsource, verb

make an arrangement where an external organization (3.1) performs part of an organization's function or process (3.25)

Note 1 to entry: An external organization is outside the scope of the management system (3.10), although the outsourced function or process is within the scope.

Note 2 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.30

monitoring

determining the status of a system, a process (3.25) or an activity

Note 1 to entry: To determine the status, there may be a need to check, supervise or critically observe.

Note 2 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.31

measurement

process (3.25) to determine a value

Note 1 to entry: This constitutes one of the common terms and core

definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.32

audit

systematic, independent and documented process (3.25) for obtaining audit evidence and evaluating it objectively to determine the extent to which the audit criteria are fulfilled

Note 1 to entry: An audit can be an internal audit (first party) or an external audit (second party or third party), and it can be a combined audit (combining two or more disciplines).

Note 2 to entry: An internal audit is conducted by the organization (3.1) itself, or by an external party on its behalf.

Note 3 to entry: “Audit evidence” and “audit criteria” are defined in ISO 19011.

Note 4 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.33

conformity

fulfilment of a requirement (3.8)

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1.

3.34

nonconformity

non-fulfilment of a requirement (3.8)

Note 1 to entry: Nonconformity relates to requirements in this document and additional OH&S management system (3.11) requirements that an organization (3.1) establishes for itself.

Note 2 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 1 to entry has been added to clarify the relationship of nonconformities to the requirements of this document and to the organization's own requirements for its OH&S management system.

3.35

incident

occurrence arising out of, or in the course of, work that could or does result in injury and ill health (3.18)

Note 1 to entry: An incident where injury and ill health occurs is sometimes referred to as an "accident".

Note 2 to entry: An incident where no injury and ill health occurs, but has the potential to do so, may be referred to as a "near-miss", "near-hit" or "close call".

Note 3 to entry: Although there can be one or more nonconformities (3.34) related to an incident, an incident can also occur where there is no nonconformity.

3.36

corrective action

action to eliminate the cause(s) of a nonconformity (3.34) or an incident (3.35) and to prevent recurrence

Note 1 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. The definition has been modified to include reference to “incident”, as incidents are a key factor in occupational health and safety, yet the activities needed for resolving them are the same as for nonconformities, through corrective action.

3.37

continual improvement

recurring activity to enhance performance (3.27)

Note 1 to entry: Enhancing performance relates to the use of the OH&S management system (3.11) in order to achieve improvement in overall OH&S performance (3.28) consistent with the OH&S policy (3.15) and OH&S objectives (3.17).

Note 2 to entry: Continual does not mean continuous, so the activity does not need to take place in all areas simultaneously.

Note 3 to entry: This constitutes one of the common terms and core definitions for ISO management system standards given in Annex SL of the Consolidated ISO Supplement to the ISO/IEC Directives, Part 1. Note 1 to entry has been added to clarify the meaning of “performance” in the context of an OH&S management system; Note 2 to entry has been added to clarify the meaning of "continual".
